## population estimates

The Population Estimates Program publishes total resident population estimates and demographic components of change (births, deaths, and migration) each year.

We also publish the

estimates by demographic characteristics (age, sex, race, and Hispanic origin) for the nation, states and counties. In addition to the resident population universe, we also produce population estimates for these universes: resident plus armed forces overseas, civilian, and civilian non-institutional at the national level; and civilian at the state level. The reference date for estimates is July 1.

Estimates usually are for the present and the past, while [projections](#) are estimates of the population for future dates. We develop these estimates with the assistance of the [Federal State Cooperative Program for Population Estimates \(FSCPE\)](#).

These estimates are used in federal funding allocations, as denominators for vital rates and per capita time series, as survey controls, and in monitoring

## Public-Use Microdata Samples (PUMS)

These files contain records for a sample of housing units with information on the characteristics of each unit and each person in it. While preserving confidentiality (by removing identifiers), these microdata files permit users with special data needs to prepare virtually any tabulation.

PUMS files are available from the [Decennial Census](#) and the [American Community Survey](#). Additional microdata files are available from [other surveys](#). See the individual listings under Subjects A-Z, or contact Customer Services on 301-763-INFO.
